### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Dobson et al. (WO 94/00885).

With respect to claim 1, Dobson et al. teach a contact fabric using a heterostructure of metal/semiconductor nanorods, the contact fabric comprising (see figs. 3-5 and associated text):

semiconductor nanorods 21 grown on a predetermined base material 11; and metal deposited 20 on predetermined portions of the semiconductor nanorods, wherein there is inherently a low contact resistance ohmic characteristic or a rectifying Schottky characteristic between the nanorods and the metal depending on characteristics of interfaces between the nanorods and the metal and depending on the difference between work functions. See abstract and associated text.

With respect to claim 3, Dobson et al. further teach the nanorods and the contact fabric have a diameter less than 500 nm. See the abstract.

With respect to claim 2, Dobson et al. further teach the contact fabric can be used in a light emitting device.

With respect to claim 4, Dobson et al. further teach the nanorod is a semiconductor made of silicon.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

Art Unit: 2814

Claims 5, 6, 7, and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Long Pham whose telephone number is 571-272-1714. The examiner can normally be reached on Mon-Frid, 10am to 5pm.
